Vision

A premier university in transforming lives and building resilient and sustainable communities

Mission

To uplift the lives of the Antiqueños and the Filipinos, UA shall produce empowered individuals through quality instruction, innovative research and development programs, sustainable resource generation activities, and relevant extension services.

Quality Policy

The University of Antique commits to hone global citizens thru the delivery of quality education of international standard anchored on scientific researches articulated through responsive instruction, extension, and production, reinforced by effective and efficient support services and driven by quality management system.

We, in partnership with our stakeholders, shall strive for continual improvement considering the statutory and regulatory requirements, client satisfaction, and industry dynamics while keeping the spirit of the Filipino and the ideals of an Antiqueño.

Dear [Hiring Manager Name],

Thank you for the opportunity to interview for the **Spatial-Temporal Analyst** position focused on targeted fogging operations. I am excited to discuss how my experience in geostatistical modeling can optimize your vector control strategies and reduce disease transmission.

In anticipation of our conversation, I've outlined the specific areas where I believe my expertise aligns with your mission:

I specialize in analyzing the "where" and "when" of disease outbreaks. By identifying **hotspots and coldspots** through Moran's I or Getis-Ord G_i^* statistics, I can help transition your team from blanket spraying to high-precision, targeted intervention.

Effective fogging relies on timing. I have experience integrating environmental variables—such as humidity, wind speed, and $\Delta NDVI$ (Normalized Difference Vegetation Index)—into predictive models to determine the optimal windows for adulticide application.

I don't just map data; I interpret it. I am proficient in using **ArcGIS/QGIS** and **R/Python** to create longitudinal studies that measure the efficacy of fogging cycles, ensuring that resources are allocated where they have the highest impact on the entomological inoculation rate (EIR).

- **Date:** [Date of Interview]
- **Time:** [Time of Interview]
- **Location/Platform:** [e.g., Zoom Link or Office Address]

I am looking forward to demonstrating how a data-driven approach to spatial-temporal analysis can minimize chemical waste and maximize public health outcomes for [Organization Name].

To:
The Officer-in-Charge of
Sibalom Municipal Police Station
Poblacion, Sibalom, Antique 5700

I am **Charles Andrew D. Mejares**, a **COMSCI** student pursuing a **Bachelor of Science in Computer Science** at University of Antique. As a requirement for my degree, I am currently conducting a research project titled: "**A Spatial-Temporal Analysis and Decision Support for barangay using A* algorithm.**"

This study aims to develop a localized digital mapping and decision-support system that utilizes **Predictive Analytics (Linear Regression)** and *Pathfinding Algorithms (A Search)**. The goal is to help your barangay visualize crime hotspots and mathematically optimize patrol routes across Sitio and purok to improve response times and resource efficiency.

In this regard, I would like to humbly request a brief interview with your Capitan or a representative to understand the current manual challenges in blotter management and patrol deployment..

Thank you very much for your time and consideration. We look forward to your favorable response.

Respectfully yours,
Charles Andrew D. Mejares.
